

Advanced Pulling Technology (APT) Unit

- 1. Fully Integrated Electronic Controls**
- 2. Heated/Cooled Operators Cabin**
- 3. Cameras With LCD Monitoring Screens**
- 4. Real Time Data Acquisition Equipment**
- 5. Adjustable Pull Force Weight Limiter**
- 6. Light Weight High Performance Synthetic Rope**
- 7. Direct Drive Hydraulic Capstan System**

Canline's Commitment to Innovation

Canline's commitment to innovation is evidenced in its state-of-the-art Advanced Pulling Technology (APT) units. All APT units feature Real Time Data Acquisition Equipment that monitors and records speed, weight, and distance in a Data Logging Record (DLR).

The APT's direct drive hydraulic capstan system, allows for smooth, consistent pulling strength at any speed, weight, and distance, making it far superior to conventional "wire-line" trucks. This unit also features specialized, lightweight, high performance, synthetic rope, which is essential for the completion of Canline's safe, long, complex pulls.
